iDispatch™
intelligent Dispatch

Are you maximizing the productivity of your limited resources? When you have an issue in the field, are you able to dispatch the closest technician with the skills, tools, and parts to do the job? Are you sure? With iDispatch you can rest assured that you're getting all you can out of your mobile workforce.

At M2M Data Corporation we can help you use location to your advantage. In order to increase the productivity of your mobile workforce, you have to know where your people and equipment are and where they are in relation to each other. With iDispatch you'll know.

Get the Complete Operational Picture

iDispatch can show you the location of all of your personnel and field assets on a map. The condition and status of your equipment can be color coded, to give you a complete operational picture, all in a single view. You can mouse over your equipment on the map and pop up the equipment's latest operating data. Click on one of your vehicles and you can see who's in it and what their skills are. When an issue arises you can now easily locate a nearby resource to address it.

You Work in Remote Areas, we do too

Displaying assets and personnel on a map is great when working in areas with paved roads, but we know a lot of people with equipment in places that isn't on the map. That why we use Microsoft's Virtual Earth™ with satellite imagery for our maps. This gives you a perspective you just can't get with other maps. We also provide ways for you to input directions and landmarks for when your equipment is located where there are no roads. We also know that in many of these locations, cellular communications just won't work. That's why we use satellite based communications to get you the location and operating data you need.

Not Big Brother

When some people hear about locating field personnel using GPS they think about Big Brother watching over them. We know that it's important that you have a trusting relationship with the people you have in the field. That's why iDispatch is not a tracking solution. The hardware we use in the vehicle has two way communication capabilities. It only report's its location when it's asked for. This eliminates the Big Brother effect and benefits the organization and empowers the organization with the location information it needs to be more effective.

About M2M Data Corporation

M2M Data Corporation is the leading provider of remote asset monitoring and management services. With solutions for compression services, exploration and production, transportation and pipeline, power generation, and driver and automation equipment OEM segments, M2M's services help customers achieve operational excellence. With iServices, you'll be better able to honor contractual commitments, maximize production, and improve efficiency.
