

M2M Enabled™ is a program for manufacturers of machine controllers, PLCs, RTUs, flow computers, etc., and system integrators and packagers looking for a hosted SCADA solution.

Sign up and join the *M2M Enabled™* program and then simply write one of our *M2M Enabled™* messaging routines for your hardware. These M2M Data Corp defined messaging routines deliver data in a predefined format to M2M's iSCADA® servers, allowing you to offer an optional remote monitoring and control service (M2M's iSCADA®) that is simple to initiate, highly secure, and can be accessed from any PC or wireless device connected to the Internet.

Developing and maintaining an M2M system for remote monitoring and control that is cost-effective, reliable, and scalable from 1 to 10,000 assets is not easy and requires experience and expertise, so why do it yourself? Instead partner with M2M Data Corp and get the immediate benefit of the leading iSCADA® service provider in the energy industry.

- ▶ No risk turnkey scalable solution (including wireless communications options)
- ▶ Fast time-to-market
- ▶ M2M is a proven partner with a successful track record in the M2M market
